

Thinking Tomorrow

# SUSTAINABLE DEVELOPMENT

## For a Responsible Use of our Resources and our Environment

VALORÈS is a research institute of applied science whose vision is about sustainable use of our resources as a means to ensure our future.

VALORÈS, through science, gives economic players and the community the tools and information necessary to better manage our ecosystem.

Our team of researchers also help businesses and communities to establish adaptation strategies to better understand and thus minimize the impact of long-term climate change.

VALORÉS stands for  
VALORization of RESources

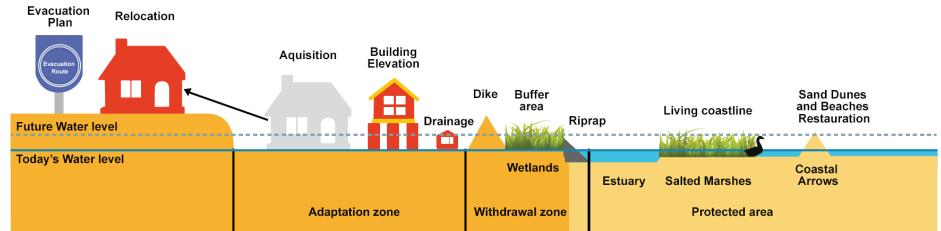

## Adapt and develop sustainable practices

*Sustainable development consists of using our resources in a responsible way to ensure their long-term availability.*

Resource sustainability is at the heart of our scientific approach in each of our departments.

Our researcher's projects attempt to solve the new challenges facing industry and communities.

The recovery of marine co-products to extract useful ingredients for other industries; the development of composts that recycle unused biomass; and developments in product processing techniques are just a few examples of the work done by our research teams.

## Climate challenge

Sustainable development is also developing strategies to deal with changes in our environment. Rising sea levels and gradual worsening of coastal erosion gave rise to the Coastal Zone Research Institute, which has now become VALORÉS.

The PA Adaptation Project is one of our regional projects designed to identify and implement measures to reduce the current and future im-

pacts of erosion and coastal flooding in at-risk communities of the Acadian Peninsula.

VALORÉS offers long-term action plans that are established with the communities. Methodically, we help to assess the risk, delimit threatened areas, explore strategic options and finally prioritize a series of practical actions to reduce the impacts of climate change.
