

Be part of the Ocean Economy

An Access to a Technological Network

The future is built on networking our top talent

What do you have to offer?

VALORÈS is a member of a Canadian network focused on the development of the ocean economy. Funded by industry and the federal government, this movement towards greater strategic collaboration aims to improve our competitiveness on the international stage.

VALORÈS stands for **valor**isation of our resources to build a sustainable future

Canada is surrounded by oceans and our maritime regions have a untapped growth potential. It is possible to enhance these resources by betting both on industry leaders, but also on the dynamism and enthusiasm of young and new players

Innovate, collaborate and modernize!

The Oceans Super Cluster (OSC) is a program that aims to invest \$ 306 million in the ocean economy in Canada. Created in 2018 by the federal government in partnership with the private sector, this industrial cluster seeks to bring together businesses to foster innovation, collaboration and modernization of Canada's ocean sectors.

Chemical content characterisation

Stimulate growth

With access to significant budgets, SGO becomes a tool to stimulate growth by investing in a new networking strategy between industries, governments, research institutes and universities.

Water quality monitoring

A large network

Established in 2018, this industrial cluster includes fisheries, oil and gas, maritime transport, aquaculture, shipbuilding and defense, as well as emerging sectors such as marine renewable energies, advanced ocean technology, offshore aquaculture and bio-marine products.

Be part of the directory

The first step in establishing this super-cluster is to identify our assets. In New Brunswick, this work will be done by Valorès on the francophone side in collaboration with Huntsman Marine of St. Andrews for the anglophone side in partnership with BioNB. So we have a mandate to identify "who" and "where" are our resources in Atlantic Canada's ocean economy.

You too can contribute

Your business probably has skills that could be useful to other partners. It is also possible that outside skills can push your business to another level. Building a network and engaging conversations in innovation and new technology is key to take our place in this blue economy.

Aquaculture research and development

Contact us, subscribe to the Atlantic directory of companies involved in the ocean economy and discover new potential partners.
